## Warranty Card

Congratulations on choosing Justi Teeth!

The Justi Company goes to great lengths to assure the finest quality teeth. As a symbol of our commitment to quality, we provide the most comprehensive guarantee in the industry.

We are proud to deliver a quality personalized denture made with Justi Hardened Plastic teeth. Justi teeth are ADA accepted and are warranted against excessive wear, breakage or discolorization for the life of your denture. If any of these problems should occur, please call your dentist immediately. Justi will provide the necessary new replacement teeth free of charge.

This warranty does not extend to the denture base which supports the teeth nor does it cover the laboratory service fee or the dentist fee. Verification of laboratory records is required.

## Certificate of Quality and Authenticity

This certificate guarantees the quality and authenticity of the **Justi** teeth which were used to fabricate your prosthetic appliance. These teeth meet and exceed ANSI/ADA Specification 15, published in 1999, for the certification of synthetic resin teeth to be used in dentures, partials and overdentures for implant technology. A certificate from the ADA is on file.

**Justi** teeth are stain resistant, wear and solvent resistant, color stable, fluorescent and photogenic. They are also vacuum processed to eliminate residual monomers.

**Justi** invented plastic teeth in 1942 and is a leader in manufacturing products for prosthodontic use.

Bruno Pozzi, President

## Certifico de Calidad Y Autenticidad

Este certificado garantiza la calidad y autenticidad de los dientes **Justi** que se usaron en la fabricación de su prótesis dental. Estos dientes llenan y sobrepasan los requisitos de la especificación 15 de la ANSI/ADA, publicado en el 1999, para la certificación de los dientes artificiales de resina de acrílico para ser utilizados en dentaduras completas, parciales removibles, y denturas sobrepuestas para la tecnología de implantes. Tenemos el certificado de la ADA en nuestro archivo.

Los dientes artificiales **Justi** están procesados al vacío para así eliminar el monómero libre residual. Son resistentes a las manchas, a los solventes, su color es estable, y son fluorescentes y fotogénicos.

**Justi** fué el primero en desarrollar y manufacturar dientes artificiales de resina de acrílico en el 1942 y es líder en la manufactura de productos para uso en la prosthodontia.
